EXCELLENT FOR: Home use, commercial and industrial multiple layer paint removal, commercial and industrial lead paint abatement, contracting restoration, etc.

## RECOMMENDED APPLICATIONS FOR TESTING:

**RECOMMENDED APPLICATION:** Test a small area first to determine time and thickness to remove multiple layers of paint. Mask surrounding areas not being stripped. Mask shrubbery, ground, etc. to protect from falling residue. Apply at least 1/4" to 1/2" thick with a scraper, roller or brush. Some paints or varnishes need only an hour to soften for removal. Other paint or polyurethane may take up to 12 hours to remove. **Remember your test area.** Scrape softened residue into a cardboard box for re-use at a later time or for disposal according to local, state or federal regulation. Use a brush or coarse steel wool to scrub surface. Be sure to stay with the grain. Wash off with water. Re-apply if necessary.

**COST CONFIGURATION:** Cost varies depending upon application and type of paint to be removed. Average coverage is 30 sq. ft. to 50 sq. ft. per gallon.
